DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 22 January 2008 has been entered.

2. All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 3-5, 9, and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen (US 7,104,970).

Chen teaches a barrel (10) with a tip (12), plunger (50) with a stopper (70) and a proximally facing annular boss (22). Fig 3.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 6-8, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen in view of Ward (US 2004/0127859).

Chen teaches the syringe as above but does teach a method of flushing a catheter.

Ward teaches a method of flushing a catheter (see background of invention) with flush solution (P0034) and a syringe with a tip cap (36). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the syringe of Chen as an alternate anti-reflux syringe with the method of Ward in order to prevent reuse and contamination of the syringe.

Response to Arguments

7. Applicant's arguments with respect to claims 1 and 3-14 have been considered but are not persuasive. Applicant has argued that 22 does not seal the passageway. The passageway as claimed is the tip portion of the barrel. In Fig 6 this "passageway" is completely sealed. The seal is "broken" once the plunger is withdrawn, not when the plunger is contacting the annular boss. Applicant further argues that 22 does not "completely surround" the passageway. This is not claimed. 22 "surrounds" the passageway, see Fig 1 showing 22 in the same manner as wall 10 of the barrel and all other figures showing 22 on both sides of the passageway. The rejection is maintained.
